

HW 2 - Warren montes

3.1) .2% of pop has C
· 9.6% false pos rate
· correct 80% of time

Bayes rule gives:

$$P(C|+) = \frac{(.80)(.02)}{(.80)(.02) + (.096)(.98)}$$

$P(C|+) \approx .1453$ or $\%14.5$ False pos. Pop

2) This is different from the quiz because the false positive rate is 9.6% as opposed to 20%.
